

FACT SHEET - YOUR CHOICE GARDEN MULCH 60LT BLOCKS

What is it?

'YOUR CHOICE' Garden Mulch 60lt Blocks are 100% Coir (coconut) from the husk of the coconut and blended grades of fibre and chip. Using our unique 'SNAP BACK' technology, it is a superb, long lasting weed suppressing, water retaining and soil temperature stabilising mulch.

Major Benefits.

- Protects plant roots from damage caused by rapid fluctuations in temperature in soils.
- Holds up to 3 times its own weight in water.
- Readily available moisture to soils and plants.
- Suppresses and reduces weeds in garden beds and around plants.
- NO NITROGEN DRAW DOWN
- Keeps soils cooler in summer, minimising water evaporation.
- Doubles as a warm protective blanket in winter.
- Convenient lightweight compact packaging.
- 4.5kg weight approximately.
- Makes 60 litres of mulch when hydrated.
- Compact easy way to take home enough mulch to do average size garden beds without the need of a truck or trailer.

Hints on using 'YOUR CHOICE' Garden Mulch 60lt Blocks.

When hydrating 'YOUR CHOICE' Garden Mulch 60lt Blocks, you can either place them in the garden bed; add water then spread to desired thickness 50mm to 60mm. Or, hydrate each block in a wheelbarrow then place hydrated mulch where needed.

When applying 'YOUR CHOICE' Garden Mulch 60lt Blocks to a garden bed it is ideal to keep it at a depth of 50mm to 60mm (2"to2.5"). 'YOUR CHOICE' Garden Mulch 60lt Blocks do not lose their colour, as the top layer of mulch dries it will go a lighter colour, when water is applied it will return to its vibrant natural colour again. Will not lose its colour or decompose over time like other mulches.

Snails and slugs do not like it; it is too absorbent for them and too coarse for them to slither over. Birds scatter the mulch less than other mulches, as there are less or no snails or slugs. Birds also find it difficult to scatter and do not see it as ideal for picking over for insects.

When top layer of mulch looks dry it will not always mean you need to water. Always scratch the surface layer to check below. If it is still moist, you may not need water.

If it's not 'YOUR CHOICE', it should be!
